Four individual portraits of student interns are displayed in a row. From left to right: a young woman with blonde braids, a young woman with dark hair, a young woman with brown hair, and a young woman with long dark hair.

PEOPLE   

Meet our summer interns

By Mary Flynn Published June 27, 2024  Comments Closed

The Puget Sound Institute welcomes four student interns from the University of Washington this summer. The interns will work with Institute scientists and staff on a range of topics including collaborative leadership, dissolved oxygen, temperature thresholds of key species, and estuarine habitat. Three of our interns come to us through the University of Washington [EarthLab](#) program and one is working on her senior capstone project.

A wide-angle photograph of an estuary landscape. In the foreground, there are green grasses and purple wildflowers. A narrow, winding water channel flows through the middle ground, surrounded by marshy land. In the background, there are hills under a clear blue sky.

A distributary channel created by The Nature Conservancy as a shortcut for juvenile Chinook as they move from freshwater to saltwater environments. Photo: Sylvia Kantor/PSI

HABITAT RESTORATION, ESTUARIES   

Photo essay: Rebirth of an estuary
